
Biocides for Coatings and Building Materials

Optimal protection for your products and plant

VINK CHEMICALS

A Team with Our Customers

Vink Chemicals GmbH & Co. KG is a family owned medium-sized company founded in 2011 and based in Kakenstorf in Lower Saxony. Vink Chemicals is involved in the production of biocide formulations for a variety of industries.

By specialising in tailor-made services in this field, we are closing an important gap in the international biocide market. We also offer a selection of speciality chemicals.

Vink Chemicals is active worldwide!

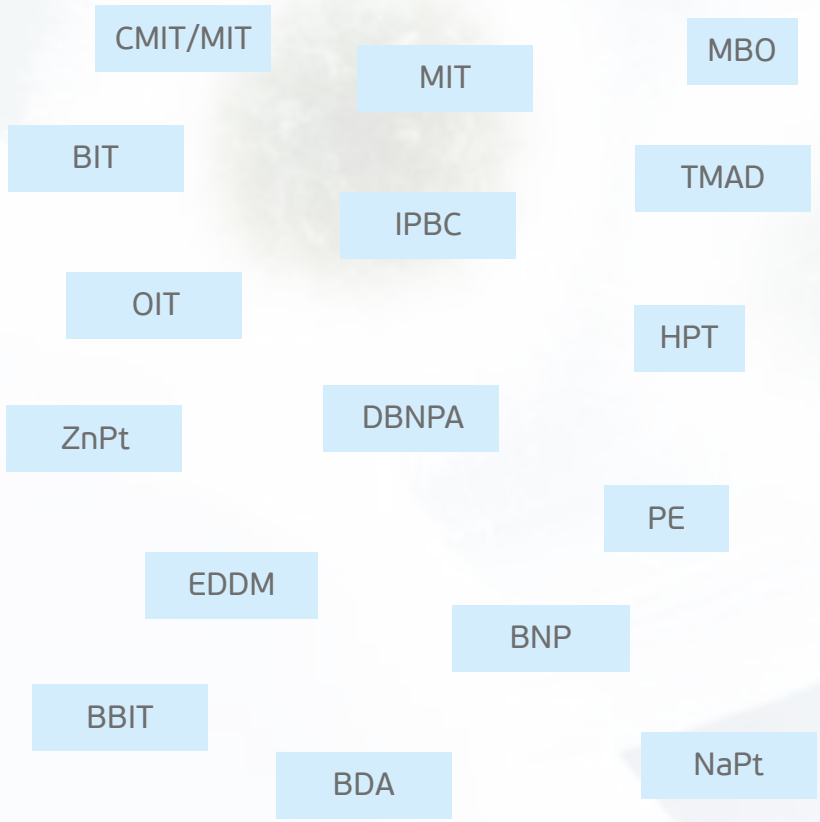
Biocides

Customised biocide formulations are more effective

The most important antimicrobial substances, used as the basis for many of our formulations, are isothiazolinones and formaldehyde releasers. To use isothiazolinones and formaldehyde releasers effectively and efficiently, it is particularly important to know their mode of action. This is where Vink Chemicals excels. Further our experts advise you in technical and regulatory questions, supporting you with tailored plant hygiene concepts.

We produce and deliver application tailored formulations, based on our portfolio of biocide active substances.

Vink Chemicals' proprietary active substances CMIT/MIT, MIT, MBO, TMAD, HPT and BIT are used primarily for preservation solutions in in paint, coatings and construction industry, as protective agents for liquids in cooling and processing systems, and as protective agents for metalworking fluids. They are also used in water treatment and as slimicides.



Biocides for Water-based Formulations in Coatings and Building Materials

In-can and film preservation | balanced preservation systems by Vink Chemicals

There is a number of factors to consider when choosing a suitable preservative for your product – different ingredients, pH value, compatibility, legal approvals and climate conditions – to list a few.

The large number of possible microorganisms, different packaging and storing conditions, and the enormous diversity of raw materials imposes demands that cannot be covered by just one microbial active used at an acceptable dosage.

With our comprehensive Vinkocide™, Promex™, parmetol® and grotan® brands, Vink Chemicals has developed sophisticated multicomponent preservative systems to confer the right protection to your products. The optimum combination of selected active substances offers sustainable preservation for all kinds of water-based formulations used in coatings, building materials and other technical products.

For the optimised use of Vinkocide™, Promex™, parmetol® and grotan® preservatives under economical and ecological aspects and for cost savings Vink Chemicals offers comprehensive technical support as well as microbiological services.

Product benefits of grotan®, parmetol®, Promex™ and Vinkocide™ at a glance:

- broad, balanced spectrum of efficacy against bacteria, yeast and mould
- liquid, stabilised formulations
- easy handling, safe application
- sustainable efficiency even at higher pH values and temperatures
- compliance with legal requirements, e.g. BPR, REACh, TRGS 611, etc.

Research and development

Our expertise is always state-of-the-art. We are able to achieve this through our own research and development at our highly modern laboratories. We examine the behaviour and composition of the active ingredients in the end products and determine optimal concentration and stability in different scenarios.

We are continuously on new trends, combining actives and molecules and creating new formulations for better product protection, optimized dosages and regulatory compliance.

Monitor the hygiene standard of your technical products and installation in an easy, safe and fast way.

Paints & Coatings additves from Vink Chemicals´ portfolio:

Vinkotech® ES are designed to prevent air entrainment during the production of water-based paints, inks and pigment dispersions. They also prevent air bubbles from causing defects in the paint film during application. These products are formulated to very low levels of VOC's, making them suitable for all interior applications. They also cover a wide variety of wood coating applications, from exterior paint for fences and sheds to interior trim/baseboard paint. We offer a range of chemistry types for clear and pigmented wood coating applications whether they are brush or spray applied. At Vink Chemicals we offer a range of chemical types to meet the individual needs of the customer, taking into account the relevant regulatory requirements, especially for indirect food packaging.

Industrial Hygiene

Individual tailored industrial hygiene advice from Vink Chemicals´ team of experts on site ensures that biocides are used effectively.

Optimizing the biocidal dosage, leads to saving money and protecting the environment. For that, it is essential to combat harmful biofilms in production plants, by applying effective cleaning and disinfection measures. We advise you on general industrial hygiene and support with regular hygiene monitoring.

All-in-one-Service

Vink Chemicals designs your individual service package

Raw material procurement

Service & consulting

Industrial hygiene

Technical advice is an integral part of our customer service. Vink Chemicals offers you a complete, individually tailored package for optimum preservation – from the identification of the microbial contamination to a concept for your plant hygiene.

We support you with microbiological tests and laboratory services, technical and regulatory advice, logistics support, raw material pro curement, research and development and many other services related to biocides and operational hygiene – all from a single source.

In particular, our expertise in toxicology and eco-toxicology as well as all aspects of the correct, efficient and economical use of biocides will help you to realise a tailor-made cleaning and preservation concept for your application.

We supply your individual biocide formulations, raw materials and specialty chemicals worldwide in all required quantities and in standard container sizes.

Microbiological tests

Research & development

Analytical service

Worldwide delivery

Vink Chemicals offers logistics support and worldwide delivery of biocides and speciality chemicals. We also handle the temporary storage of goods worldwide. Thanks to our subsidiaries and partners, our products are available locally and in the national currency.

130+ specialists worldwide

Laboratories in Germany, France and China

Own R&D department and laboratories with over 30 years of experience

Worldwide distribution network

System Cleaner

„Cleaning is the beginning, not the end, of the production cycle“

A good and efficient hygiene concept is a prerequisite of every chemical manufacturer. Doing so minimizes the final cost of the product and helps to ensure that a quality product is manufactured and delivered.

Vink Chemicals has developed the system cleaners Vinkoclean™ SR 1 and Vinkoclean™ SR 3 (biocide-free) as well as grotanol® range (biocidal product), which reliably remove biofilms and microbes, sludges and other contaminants.

Biocidal solutions:

Ensuring reliable product quality also includes a regular cleaning and microbiological sanitation of the production plant, surfaces and apparatus. Vink Chemicals offers under the brand name grotanol® several system cleaners which provide good immediate effects at a low use concentration. They have a broad spectrum of effect against bacteria, yeasts and moulds.

Biocide-free solutions:

Optimal plant hygiene can improve the effectiveness of biocides. That saves money and reduces environmental impact. Hygiene also includes the control of harmful biofilms in production systems. Effective cleaning measures can reduce their growth. For this purpose we offer the system cleaners Vinkoclean™ SR 1 and Vinkoclean™ SR 3, which can be used alone or in combination with biocidal components, as needed. They are used for regular cleaning of production systems based on materials, operating parameters and the degree of infestation.

Their outstanding cleaning performance removes dirt, bacterial slime, moulds and yeast colonies. Containers and lines are also effectively cleaned at inaccessible locations. When correctly selected and implemented, system cleaners minimise the germ load that is present in production processes for paints and coatings. This basis enables the efficient use of the necessary biocidal formulations for product preservation.

Production Hygiene

Vink Chemicals system cleaning solutions

Biocidal System Cleaners

grotanol® SR 2

Active ingredients

- reaction products of paraformaldehyde and 2-hydroxypropylamine (ratio 3:2); [MBO]
- Sodium salt (NaPt)

Benefits

- High concentrated and free of water
- Broad, balanced efficacy against bacteria, yeasts and moulds
- Excellent cleaning and micro-bicidal efficacy
- Low foaming
- Fulfils the requirements of the EN 1275
- BPR-application*: PT 2 + PT 13

Technical properties

- Maximum manufacturing temperature: 60 °C
- Max. pH-value of end product: < 11
- Shelf life: 24 months

grotanol® 3025

Active ingredients

- Glutaral
- CMIT/MIT

Benefits

- Water based combination of actives
- Excellent bactericidal efficacy (incl. sul-phate-reducing bacteria)
- Good head space protection
- Eminently suitable for disinfection and sanitation of contaminated plants
- Free of VOC and formaldehyde releasers
- BPR-application*: PT 2

Technical properties

- Maximum manufacturing temperature: 50 °C
- Max. pH-value of application: < 8.5
- Shelf life: 36 months

Biocide-free System Cleaners

Vinkoclean™ SR 1

Active ingredients

- Alkaline

Benefits

- All-in-one cleaner with a broad range of applications
- Good cleaning efficacy
- Economic usage
- Only short interruption of production
- Easy to rinse off
- Contain bio dispersants

Technical properties

- Maximum manufacturing temperature: Room temperature
- Max. pH-value of end product: n.n.
- Shelf life: 18 months

Vinkoclean™ SR 3

Active ingredients

- Acidic

Benefits

- All-in-one cleaner with a broad range of applications
- Good cleaning efficacy
- Economic usage
- Only short interruption of production
- Easy to rinse off
- Contain bio dispersants
